MEASURING FLAT SPOTS

The following information is provided for crewmembers when they determine that their train has one or more measurable flat spots. It is taken directly from the 9th Edition of the NORAC Rulebook.

Crewmembers responsible for measuring flat spots must obtain “3 STEP PROTECTION” as outlined in TRO-5, Safety Rule 350, and they must have updated job briefing to discuss the method of operation based on the measurement(s) taken.

NORAC OPERATING RULE

71. Flat Spots

If a flat spot on a wheel of a car or engine develops en route, a member of the crew must inspect it. Upon completion of inspection, the train will be governed as follows:

- a. **Proceed at Normal Speed:** The train may continue at Normal Speed if no other defects affecting movement are observed, AND if:
 1. The flat spot is less than 2½ inches in length.or
 2. If there are 2 adjoining spots, each is less than 2 inches in length.
- b. **Proceed at 10 MPH:** If a flat spot is found in excess of either of the above dimensions, but less than 4 inches, and no other defect is observed, two actions must be taken:
 1. Speed must not exceed 10 MPH.
 2. A report must be made promptly to the Dispatcher or Operator.
- c. **Remain Stopped:** If a flat spot of 4 inches or greater is found, the train must remain stopped until a report is made to the Dispatcher or Operator. When determined safe for movement, the Dispatcher (or Operator when authorized by the Dispatcher) will order the car or engine to be set out at the first available siding or terminal.
